RESEARCH EXPERIENCE

Graduate Student Researcher

Cornell University

Ithaca, New York

Aug. 2024 – Present

- Designing control plane and simulator support for circuit-switched AI datacenter scale-out.
- Implemented straggler-mitigation collective communication algorithm for distributed ML workloads.
- Developed physical layer routing algorithms for silicon photonic fabrics in rack-scale ML networks.
- Built compute and networking resource scheduler for reconfigurable optical networks based on TPU torus topology.

Machine Learning System Research Assistant

SymbioticLab, University of Michigan

Ann Arbor, MI, United States

May 2023 – Apr. 2024

- Developed *Propius*, a Federated Learning (FL) resource management system, based on a microservice architecture.
- Built and deployed a distributed FL evaluation framework in GPU clusters, supporting multi-job parallel training.
- Implemented *Venn*, an advanced scheduling policy, in *Propius* that improves the average FL job completion time by up to 1.88x compared to random allocation.
- Contributed to open-source project *FedScale*, the largest benchmark for FL, in adaptive FL optimizer implementation.

Embedded System Research Assistant

The Fan Lab, University of Michigan

Ann Arbor, MI, United States

May 2023 – Sep. 2023

- Developed *WASP*, a wireless wearable device, capable of monitoring sweat for early disease detection.
- Designed a reliable communication protocol that operates atop I2C and Bluetooth Low Energy protocols, ensuring high-fidelity data communication between two in-device microcontrollers and a terminal microcontroller.

Machine Learning Theory Research Assistant

John Hopcroft Center, Shanghai Jiao Tong University

Shanghai, China

Sep. 2021 – Mar. 2022

- Studied, implemented, and theoretically analyzed Non-Contrastive Self-Supervised Learning (SSL) algorithms.
- Conducted experiments, and compared the performances of Non-Contrastive SSL and traditional Supervised Learning, showing the robustness of SSL methods on imbalanced datasets with long-tail distribution.

WORK EXPERIENCE

Artificial Intelligence Internship

Bosch

Shanghai, China

May 2024 – Aug. 2024

- Designed and implemented a multi-agent system using LangGraph, OpenAI endpoints, and Neo4J graph database for retrieval augmented generation and domain-specific task reasoning.
- Deployed the system on Microsoft Azure for internal use, achieving an estimated 30% reduction in man-hour.
